

Why is the HiddenCures Ionizer so Inexpensive? Where's the Catch?

Other flow-through ionizers cost \$500 and up, and batch ionizers cost \$1,000 and up. Yet, the G-2 is capable of producing the same quality of ionized water as the more expensive ionizers. The reason the G-2 is so inexpensive is:

1) It is an extremely simple no-frills design. All non-essentials have been stripped away. Only what is necessary to make *quality* ionized water has been provided. We don't skimp on the essentials so we use non-toxic platinum-titanium electrodes and titanium wire.

2) To quickly ionize water requires large expensive electrodes. And large electrodes requires a large power supply. We use small electrodes and a corresponding small power supply, both of which are much less expensive. Expensive batch units can ionize water in 10 to 15 minutes; the HiddenCures unit takes 1 hour (standard strength pH= 10) or overnight (maximum strength pH=11.5). We have traded ionize time for cost to make the unit affordable.

3) Electrodes require cleaning, and many units have a cleaning cycle. To keep the G-2's electrodes clean you simply alternate them with each new batch.

4) There are no electronics, not even a fuse, just a simple power supply, nothing expensive to go wrong.

5) Instead of using an expensive membrane, the G-2 uses inexpensive fiber that can be easily replaced at low cost.

Testimonials

"I really want to thank you for making this unit. I mean, it truly works and is inexpensive. It's very simplistic (even though I wouldn't have attempted to make one myself) and it works great! I admire your creativity in its construction and quality. Some of the simplest designs work the best. Thank you for making it. And at the

price you market them at I know you will attract a lot of new customers." T.N.

"The ionizer is working great. I can't believe what a difference it has made in my health. I can drink a full glass of water before retiring and not have to get up all night. I assume that is because I'm absorbing the water better. I'm drinking more (a gallon a day) and peeing less. Thanks so much for your wonderful product!" S.V.

From a Live-Blood Analysis Practitioner:

"What I noticed under the microscope when I used alkaline water is that red blood cells had a much healthier circular spherical shape, the cell membranes were more rigid, and the cells were separate and did not stick together. This separation, a result of the cells repelling surface charge due to electron rich ionized water, is necessary for the cells to perform properly." MM

Life Depends On Good Water

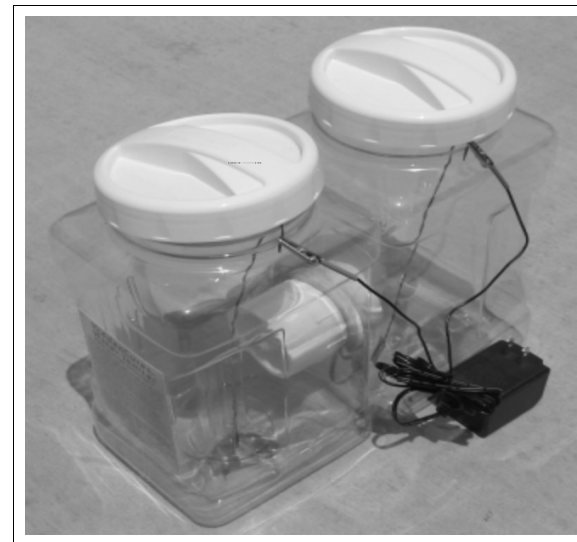

Ionized water is the best solution to providing a safe source of free electrons to block the damage to tissue by free radicals.

Inexpensive G-2 Ionizer Makes Quality Water

- Reverses Aging by Neutralizing Free Radicals
- Anti-Oxidants For Health and Long Life Are Made In the G-2. Produces Alkaline Water With Smaller Clusters to Improve Hydration
- Ionized Water Is the Secret to Weight Loss and Keeping It Off
- Makes -600 to -800mV ORP, Stronger Than Most Ionizers

Alkaline Water Heals You

Alkaline water and acid water are produced simultaneously when water is ionized, and both have benefits. Alkaline water is produced in one jug; the acid water is produced in the other jug. Alkaline water is consumed for its many health benefits; acid water is not consumed but is used for external healing and disinfectant -- it is also good for the hair and skin.

- **Produces powerful antioxidants that protects cells**

The health benefits of drinking alkaline water are due to the presence of a powerful antioxidant known as the negative hydrogen ion. This H-minus ion is very short-lived and lasts only 12 to 18 hours. Normal tap water has an ORP (oxidation reduction potential) of about +200 to +500 mV which makes it apt to acquire electrons, i.e., oxidize other molecules including your cells, thereby causing them damage. This is why you take anti-oxidants like Vitamin A, C, and E which provide electrons to donate to electron-thieving active oxygen (known as free radicals). Alkaline ionized water has an ORP of about minus 200 mV (standard strength), minus 600 to 800 mV (maximum strength), which gives it a large mass of electrons ready to donate; alkaline water is a powerful anti-oxidant (free radical scavenger) that protects your cells from damage and promotes health. It is the most effective and economical source of antioxidant on the planet.

- **Reduces cluster size of water, improves hydration and nutrition to cells**

Regular water has molecules that group in clusters of about 13 molecules which, when ionized, is reduced to about half that size, and surface tension is also reduced. Reduced

cluster size and surface tension have beneficial effects upon one's health by allowing the water to penetrate the cells and tissues, thereby reducing chronic dehydration common in many people, and allowing the body to better deliver nutrients to all the cells, tissues, and organs.

- **Dissolves acid waste, reverses aging, improves various illnesses**

Sang Whang, in his book *Reverse Aging*, defines aging as the accumulation of acid waste. He states that alkaline water helps to dissolve acid waste that accumulates in the body, that reverses the aging process. There are anecdotal reports of improvements in diabetes, constipation, ulcers, blood pressure, allergies, circulation, migraines, obesity, osteoporosis, and menstrual irregularities after drinking alkaline water every day for several months. It inhibits excessive fermentation in the digestive tract resulting in a cleaner stool within days after being taken on a regular basis. The use of alkaline water as a preventive is reportedly expanding in Japanese clinics and hospitals.

- **Removes plaque**

The positively charged plaque is removed from teeth by swishing for a few minutes with negatively charged alkaline water. Use it instead of toothpaste. Promotes healthy teeth and gums.

- **Improves fat burning**

When your acid level is too high, insulin sensitivity is produced. This causes your body to produce too much insulin that makes your body convert calories into fat - INSTEAD of burning them off. Alkaline pH = fat burning!

Acid Water is Good for External Use (Do Not Drink)

- **Kills bacteria and fungi**

Acid water acts as a super-oxidant to disinfect and sterilize surfaces, skin, wounds, and surgical instruments. It will kill bacteria, viruses, and fungi by withdrawing electrons from them. Thus, it is good for cleaning hands, utensils, fruits, vegetables, meats, fish minor wounds, diabetic ulcers, and cutting boards. It can treat athlete's foot, minor burns, insect bites, scratches, blisters, and so on. Use it as an antiseptic. When foods are washed with acid water it reduces spoilage and extends shelf life.

- **Improves skin and hair**

Helps heal cuts, blisters, scrapes, or rashes. Excellent treatment for acne, eczema, and for fungus such as athlete's foot. Can be used to condition the hair. Works as an astringent to pull skin tighter; improves complexion. It removes skin oil and greasy dirt without harsh chemicals. Relieves chapped hands and dry, itchy skin. Provides excellent relief from mosquito bites, bee stings, poison ivy and poison oak.

- **Great for plants**

Promotes plant growth and extends the life of cut flowers. Reduces fungus on most plants.

Flow-Through vs. Batch

There are two types of ionizer: Flow-through, and batch. Flow-through is connected to the faucet, and ionizes the water as it flows through in 1 or 2 minutes. In a batch unit, you fill reservoirs of water, and it typically takes 1 hour to ionize the water, but the ionization can be much stronger in a batch unit. Ionizers require minerals to work, so flow-through units are limited to a simple carbon filter to allow minerals to flow through, but so can toxins. Batch units start with purified non-toxic water, and you add sea salt for minerals.
